

# Notes App Project: (Advance)

Once you enter the Title, note and clicked on Add note button, a note object should be created with the following points:

1. Note title
2. Note
3. Delete note button
4. Edit note button
5. Date (the note was created) should be displayed

You will create the function for the Delete and Edit buttons.

*#This image is for reference, we expect from you to show your own design but all the mentioned functionality should be there.*

*Note: If the Title is not entered by the user, an alert or pop-up should be displayed saying - "Please enter the title". All the notes will only get saved when they have a title.*
